DETAILED ACTION

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kosik et al (U. S. Patent no. 5,700,227,).

See entire document. The brake actuation is detected by either pressure, stroke or force (see column 2 lines 13-30 and column 4 line 21-29). Vehicle speed is detected downstream of the clutch by sensor 11. Clutch is completely disengaged above brake pressure Ps (see figure 1 or Column 3 lines 10-14). The controller controls the torque transmitted by the clutch such that the torque declines as brake pressure increases (see figure 1). Alternatively, the clutch engagement is controlled by vehicle speed (see column 4 lines 7-20).

4. Claims 1,2 5,6 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasa (U. S. Patent no. 5,020,645).

See Figures 2(d)-2(g) in which the clutch activation is controlled by the amount of brake force applied.
